WILD FLOWERS

(Inc.)

Rose City, Mich.

Wild Flowers

Our nursery is located one mile south of Rose City, which is approximately two hundred miles north of Detroit on state highway M 33 right at the entrance to the wilds of Northern Michigan. You are always welcome to visit our nursery and woodland at any time.

Wild Flowers, Inc. is devoted exclusively to the preservation and propagation of the native flora of the Northern States. At the present time we have over one hundred varieties under cultivation, many of which are not listed in this catalogue due to the scarcity.

You will find our nursery grown plants far superior to those dug from the wild state. Some of the varieties offered in this list are dug from the wild but we hope to be able to supply all varieties from nursery grown stock in the course of a few years.

PACKING

We have not had a single complaint on our packing methods for many years. There are no charges made for boxes or cost of packing.

SHIPMENT

Unless method of shipment is stated, goods will be shipped either Parcel Post or Express.

PRICES

All prices are F. O. B. Rose City except on items at single price amounting to \$2.00 or over on which we pay the postage up to and including the fourth zone, and on items at the per ten rate amounting to \$10.00 or over. We will be glad to quote special prices on larger quantities. Five plants of any one variety at the ten rate and fifty at the hundred rate.

Preceding each plant name is a numeral which is a key to the price table at the bottom of the right hand page.

Practically any plant in this list is suitable for Rock Garden planting, subject, of course, to the general conditions of moisture and exposure indicated for each particular plant.

The adaptability of any plant to your Rock Garden would be determined by these conditions, and in addition, the height and manner of growth. For an extensive rockery, using large rocks, the taller plants will make a beautiful showing, while with smaller rocks, say six to eight inches, a better effect is achieved by use of lower growing varieties.

After each plant name is a letter or group of letters which indicates the location in which they naturally grow. The significance of the letters are as follows:

Dw means Dry Woods.

Mw means Moist Woods

F means open Fields

M means wet meadows and borders of streams

B means Bogs

W means Water

Ter means plants suitable for a Terrarium.

PERENNIALS

1	<i>Achillea millefolium rosea</i> Pink Yarrow	F		
3	<i>Acorus calamus</i> Sweetflag		W	
5	<i>Actaea alba</i> White Baneberry		Dw Mw
